

Interactive meetings are more successful / **This is Why** we enable people to use their mobile devices to connect with Sharp's BIG PAD display.

Work smarter with the Touch Display Link

Make the most out of your investment in Sharp's BIG PAD interactive displays by connecting them – using wireless LANs – to smartphones and tablet PCs. Content from the BIG PAD – including notes and writing made by the meeting leader – will be mirrored on participants' devices. It's the easy, interactive, and smarter way to work together on projects, share ideas and enjoy more effective meetings.

SHARE. COLLABORATE. COMMUNICATE.

A versatile, simple system

The Touch Display Link software is installed on the PC connected to the BIG PAD display. Meeting participants need to visit the Apple App and Android App market to download the free app to their device. In the meeting they use their Wi-Fi search tool to simply connect to the BIG PAD pen software and link their device to the screen. With many employees bringing their own technology to work, they can easily use their devices to connect to the BIG PAD and collaborate more effectively in meetings.

Write, share, and collaborate for more engaging meetings

- Easily connect and share information between the BIG PAD and tablet PCs
- Notes and drawings made on the BIG PAD display will appear on users' devices in real-time
- Up to 20 people can connect at once*
- Participants can share their own files and have these displayed on the BIG PAD and across all other devices in real-time. The BIG PAD can be used to interact with the content including making notes and drawing on the content and zooming-in and out
- Participants can use their device to control elements of the BIG PAD including slide changes in a presentation, the mouse pointer and enlarging and shrinking images
- After a meeting a PDF file including the presentation and notes can be sent to participants

Specifications

Categories		Data	Notes
Tablets and smartphones		App is available for download with compatible devices only	<ul style="list-style-type: none">• Install appropriate applications for each file format such as Microsoft Office and Adobe Reader.
