

LCD Colour Reproduction Closer to CRT Quality Mitsubishi Electric's New Colour Algorithm

Supports sRGB

6-Axis Colour Control

Video Mode Function

A new algorithm developed by Mitsubishi has made colour reproduction on LCD display to much closer quality of the CRT. It allows instant compatibility with the new colour reproduction standard sRGB, features 6-axis (R, G, B, Y, M, C) colour control and Video Mode for high-quality processing of DVD and other moving images. Mitsubishi's New Colour Algorithm is an epoch-making technology that will revolutionize the LCD display industry.
